Project Executable Files

Date	01 July 2026
Team ID	SWTID-2026-9188
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section contains all executable and deployable files required for the Credit Card Approval Prediction System. All project files are organized properly to enable the evaluator to run or deploy the application using the provided source code, setup instructions, and dependency files.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
Credit-Card-Approval-Prediction/
│
├── app.py
├── model.pkl
├── preprocessor.pkl
├── requirements.txt
├── Dockerfile
├── README.md
├── .env.example
├── prediction_logs.json
│
├── static/
│   ├── css/
│   ├── js/
│   └── images/
│
├── templates/
│   └── index.html
│
├── models/
│   └── random_forest_model.pkl
│
├── tests/
│   ├── test_model.py
│   └── test_app.py
│
└── dataset/
    └── credit_card_dataset.csv
```

SMARTBRIDGE Let's Bridge the Gap

Step 3: Deployment / Access Details

Field	**Details**
Hosted / Deployed URL	https://credit-card-approval-prediction-envs.onrender.com/
Login Credentials (Demo)	Not Required / Demo Access
Platform / Hosting Provider	Render / Railway / Local Flask Server
Repository Link	https://github.com/isyedrayan1/credit-card-approval-prediction

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Download or clone the project repository.
2. Install all required dependencies using pip install -r requirements.txt.
3. Place the trained model files in the project directory (if not already included).
4. Run the application using python app.py.
5. Open the displayed localhost URL in a web browser.
6. Enter the applicant's details and click **Predict** to view the approval result and generated risk audit report.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality of input data.	Validate user inputs before prediction.
2	Model performance may decrease for unseen or highly imbalanced data.	Periodically retrain the model with updated datasets.
3	Internet connection is required for deployed version access.	Local deployment can be used without internet.
